                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FOR TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

INDUCTION: ACTIVATED BY ACTIVIN, BASIC FIEROBLAST GROWTH FACTOR (BFGF) AND FORK HEAD.

PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT CA CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOTICE OF THE MEMORY GENERATED NOTICE OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY GENERATED NOTICE OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY GENERATED NOTICE OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY OF A PROPERTY OF A PROPERTY OF THE MEMORY OF A PROPERTY OF THE MEMORY OF A PROPERTY TO THE C-TERMINAL OF THE MEMORY OF A PROPERTY OF THE MEMORY OF THE MEMORY OF A PROPERTY OF THE MEMORY O
                                                                                                                                                                                                                                                                                                                                                                                                                                 TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY).

SIMILARITY).

SINCLARITY ON THE CONTINUE SERVICE OF SHOULARITY OF SHOULARITY OF SHOULAR LOCATION: THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDITATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TO MEDITATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED IN THE VENTRAL MIDLINE OF THE NEURAL TUBE AND BRAIN. ALSO FOUND IN THE NOTOCHORD AND IN DEVELOPING FIN BUD. IN THE DEVELOPING BRAIN, EXPRESSION OCCURS IN DOMAINS THAT INCLUDE A DISCRETE REGION IN THE FLOOR OF THE DISNCEPHALON.

THE CUDENCY OF THE ANTENIOR SASTRULATION. BY 9.5 HRS OF THE EMBRYONIC SHIELD DURING GASTRULATION. BY 9.5 HRS OF THE EMBRYONIC SHIELD DURING GASTRULATION. BY 9.5 HRS OF THE EMBRYONIC MIDHAL DURING GASTRULATION. BY 9.5 HRS OF THE EMERCHAIN. EXPRESSED IN A CONTINUOUS BAND THAT EXTENDS FROM THE FRAIL TO THE HEAD, THE ANTERIOR BOUNDARY OF EXPRESSION BEING POSITIONED IN THE CENTER OF THE ANIMAL POLE ANTERIOR TO THE PRESUMPTIVE MIDHALING DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL MOIETY TO THE C-TERMINAL POLE ANTERIOR TO THE PRESUMPTION OF THE CHEAVAGE OF THE PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE CETTERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

SIMILARITY:

-i- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURPACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-i- TISSUE SPECIFICITY: STONGLY EXPRESSED IN NOTOCHORD AND NEURAL FLOOR PLATE DURING EMBRYOGENESIS. IN TADPOLE, HIGH EXPRESSION IS OBSERVED IN PANCREAS/STOMACH, MODERATE EXPRESSION IN TAIL, AND LOW EXPRESSION IN INTESTINE, BRAIN, AND HIND LIMB.

-i- DEVELOPMENTAL STAGE: FIRST DETECTED AT THE NEURULA (STAGES 16-17).

FIRST PEAK OF EXPRESSION AROUND TADPOLE HATCHING (STAGES 33-40).

HIGH EXPRESSION OBSERVED IN INTESTINE AT THE CLIMAX OF MORPHOGENESIS (STAGES 60-62) WHEN INTESTINE EPITHELIAL UNDERGOES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ruiz I Altaba A., Jessell T.M., Roelink H.;

                                                                                                                                                                                                                                                                                                               PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN ADD COVALENT ATTACHMENT OF A CHOLESTEROL MOZETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURGE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                            1126
